

AutoCAD Workshop #1

ARCH@UCSD

How can you use AutoCAD?

Shortcuts Using “Function” Keys

F1: Help

F2: Switch Between Command
Line/Dynamic Input

F3: OSnap On/Off (ex:
midpoint, center, node, etc)

F7: Grid On/Off

F8: Ortho On/off

F9: Snap On/Off

F10: Polar On/Off

F11: Object Snap Tracking
On/Off

More “Function” Shortcuts (More Advanced)

F4: 3D-OSnap On/Off (Specific Snaps like endpoint, midpoint, center, etc.)

F5: Isoplane Top/Left/Right (3-D)

F6: Dynamic UCS On/Off (X-Y Axis)

All commands can be typed
out as well

Floor plan example

Residential room
From 7th College
Project

This is what we're
going to try to
create

But first we're going
to start off with the
basics

(Ignore the dimensions cuz
it wacky)

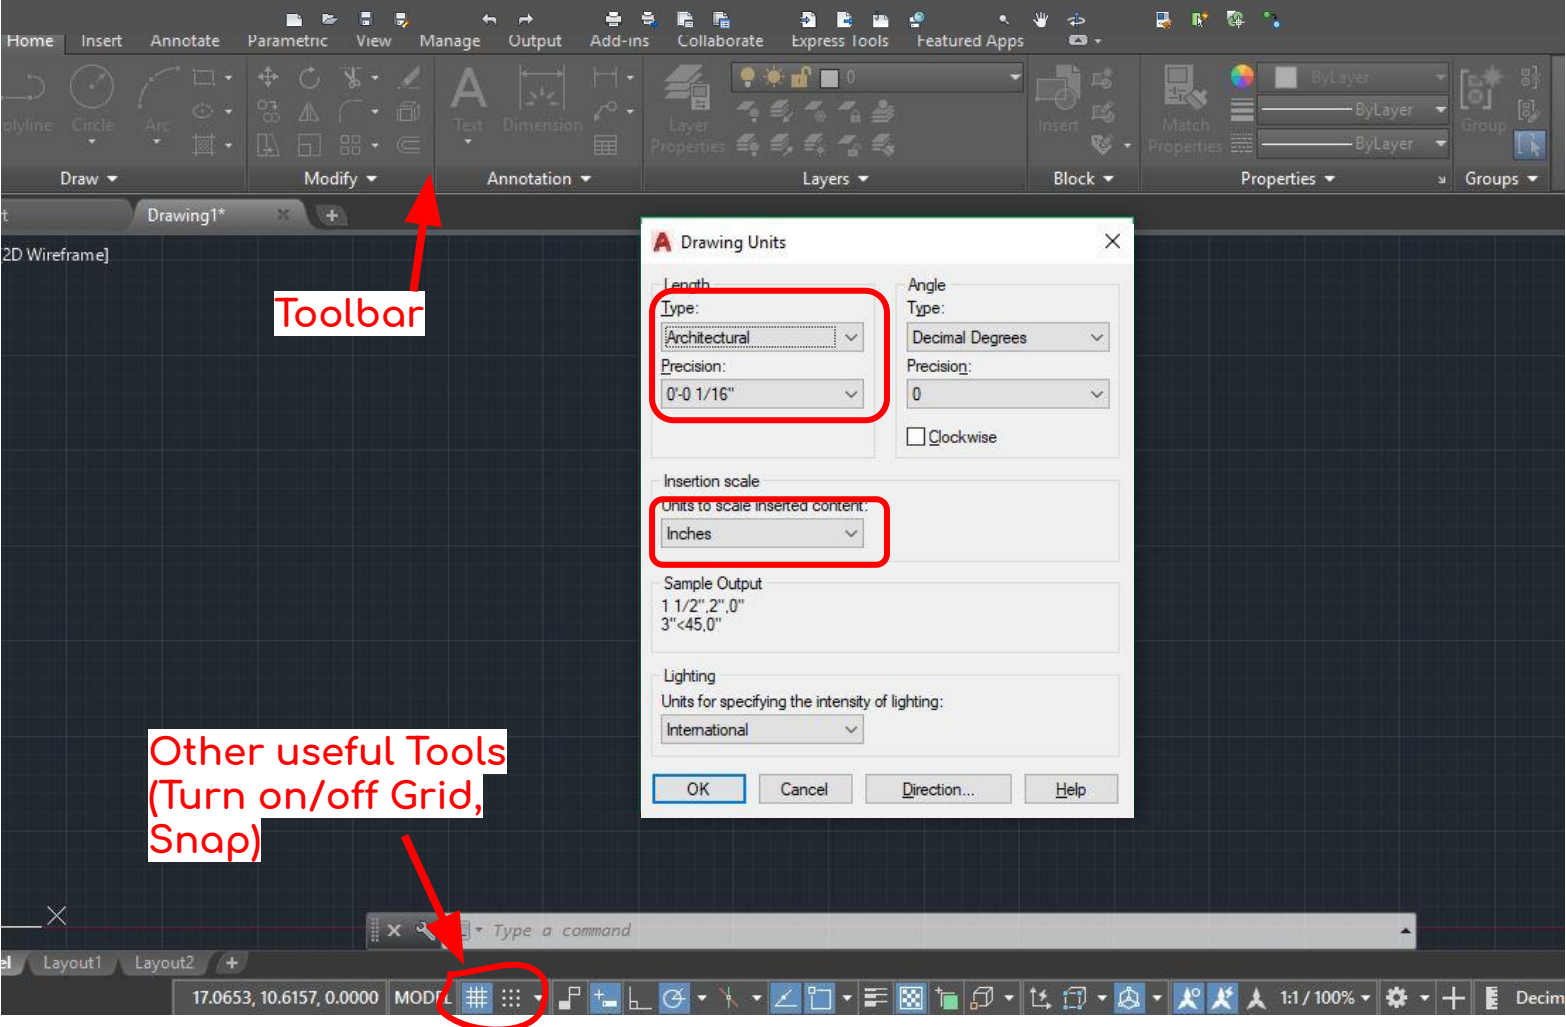

PLAN D-1

1. Open up AutoCAD

2. Set file unit in menu bar
Format → Unit

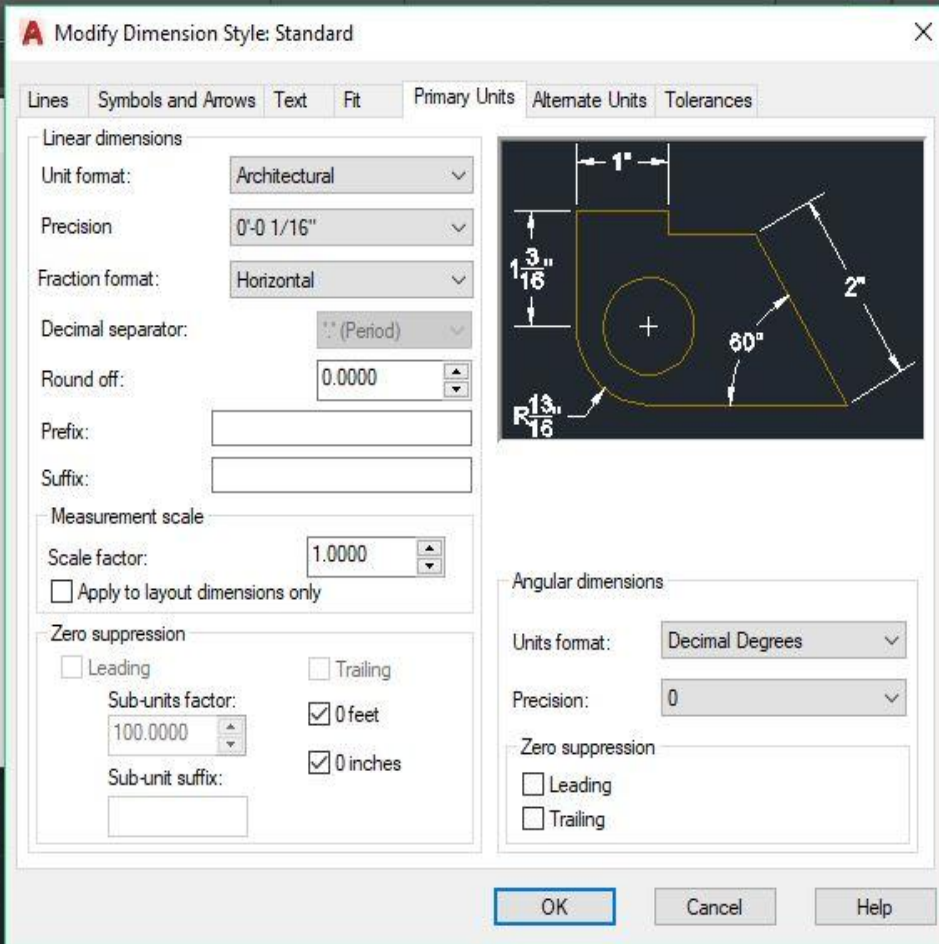

3. Set page size if possible

4. Play with **Tools**

Toolbar

Other useful Tools
(Turn on/off Grid,
Snap)

5. Set dimension unit by typing

“dimsty”

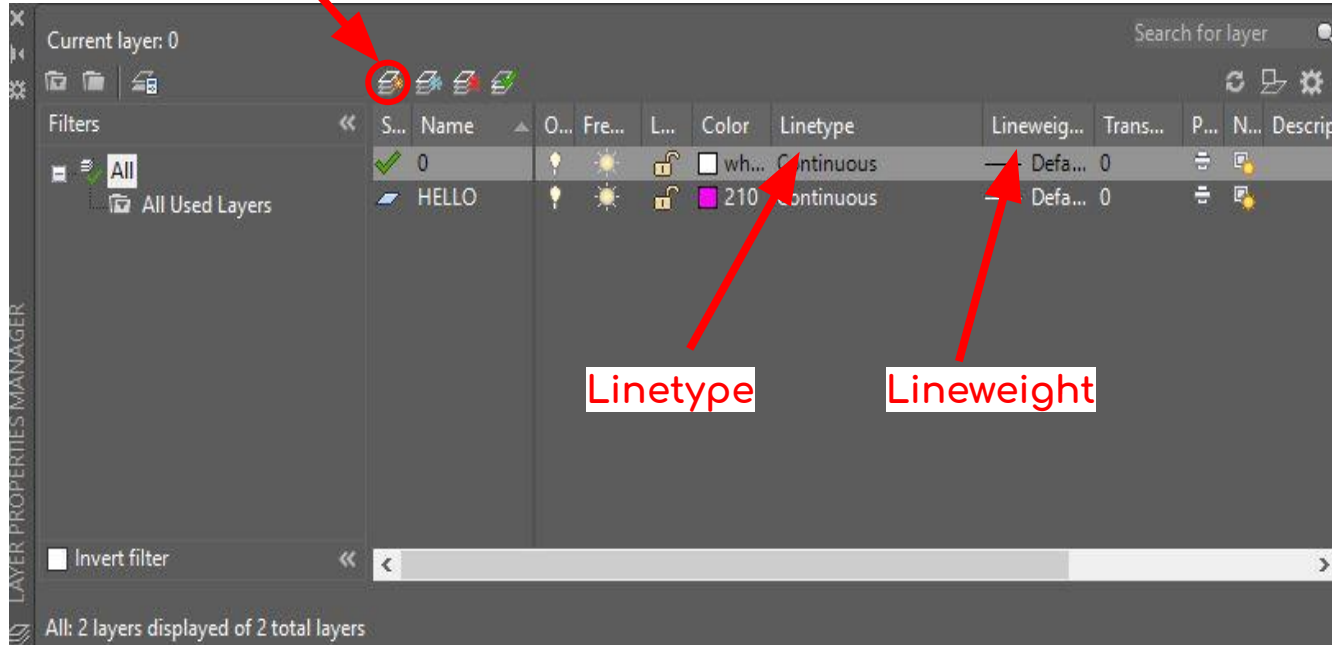

(AutoCAD allows typing command)

6. Then click modify and set unit to

architecture and
precision to
0'-0 1/16"

Click **text** → **height**
change to **1"**

New layer

Linetype

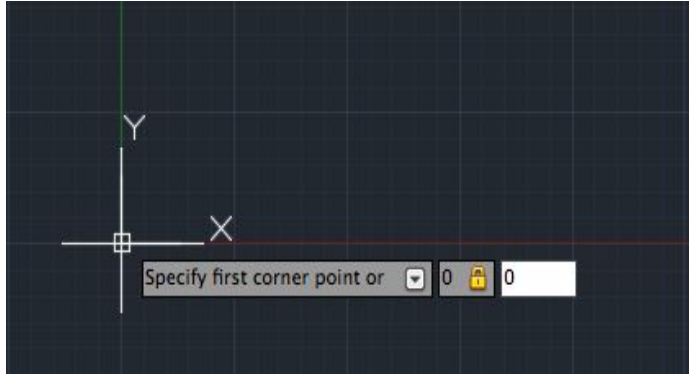

Lineweight

5. Set layers by typing “**layer**”

6. Then create new layers accordingly with different **colors**, **lineweight**, and **linetype**

You can create more layers as working on your design

Let's draw a simple floor plan!
Start with a rectangle - room outline

7. Turn on
Grid (F7)

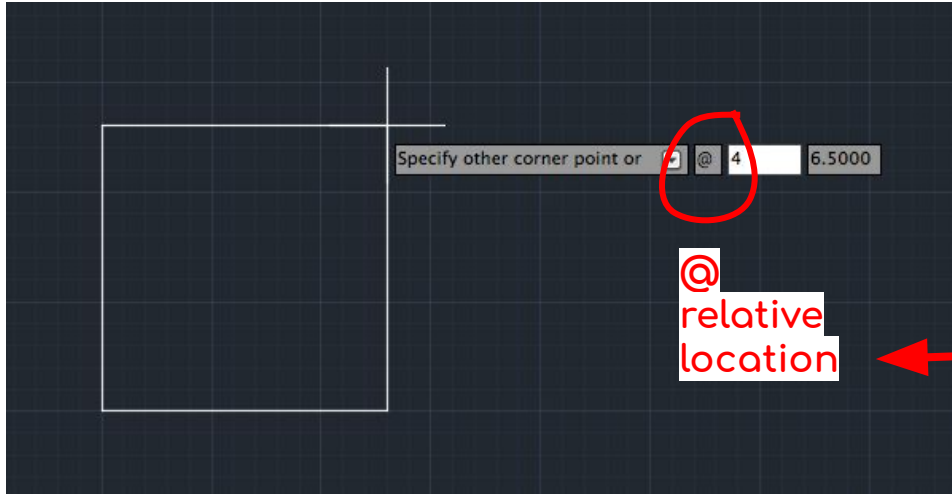

bottom right

8. Choose
Rectangle tool

9. Two ways to
draw

- Directly type start
and end coordinates
#,#

- Choose a start point
and enter the **relative**
coordinate **@#,#**
(# number)

@
relative
location

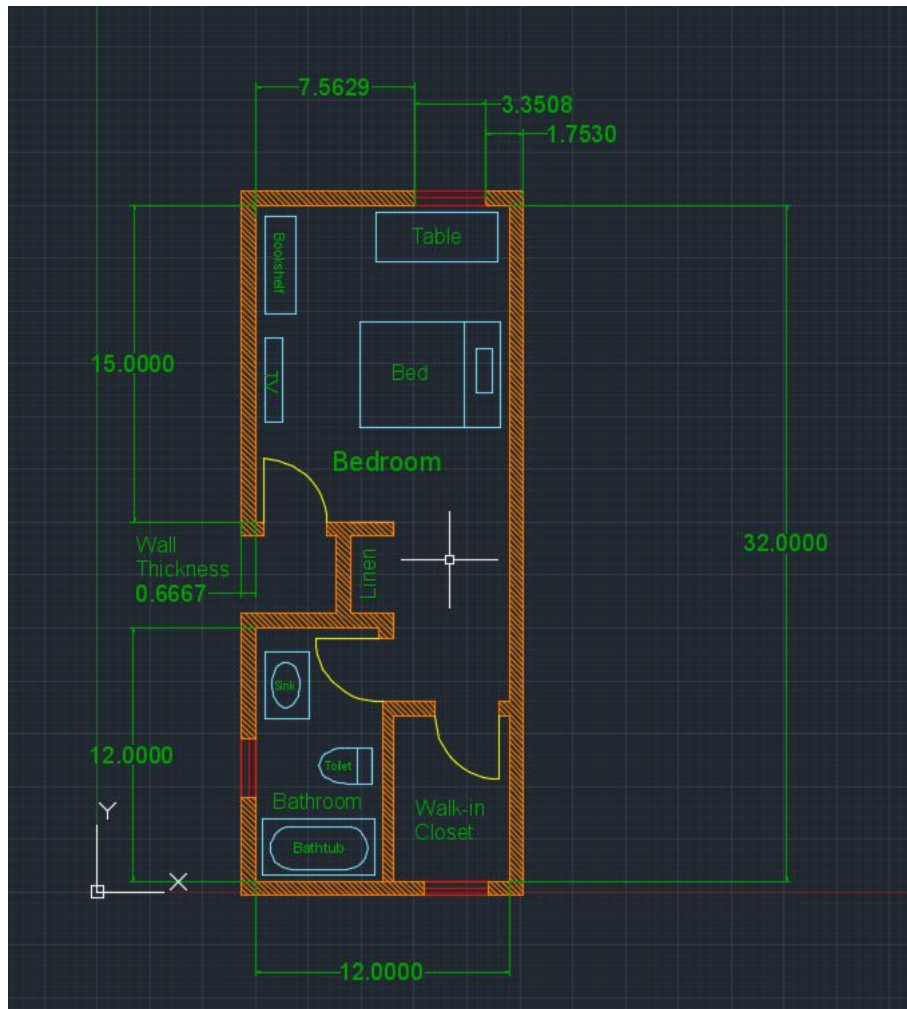

10. Draw dimensions on the wall 

11. Type "line"
Or choose 
to draw furnitures

You can use other tools!
Feel free to explore :)

Remember to draw in
the right layer!!!
In this example, the **blue**
indicates the **walls** and
yellow, the **furniture**

This is an example room plan

Type in **offset** to create the walls

Use the **hatch** tool to fill patterns inside the wall

You can also turn on/off other layers to see specific layers

Layer Off

Use "Start, Center, Angle"

Let's draw out a simple door symbol!

Go to **Arc** (top left of Home Tab) and click the the drop-down menu

Choose "Start, Center, Angle"

After, you'll want to **trim** to get rid of excess lines

Helpful links (they're short videos)

How to **trim/extend** (helpful to cut out space for doors/windows)

<https://www.youtube.com/watch?v=Yhzi0EMOpOQ>

How to **offset** (super helpful to create walls)

<https://www.youtube.com/watch?v=lsn3LcPvEiY>

How to **stretch**

<https://www.youtube.com/watch?v=BxSLyCAc5-l>

How to **scale** a drawing/object

<https://www.youtube.com/watch?v=pchTjPmpJtU>

Try to draw this out!

Please don't hesitate and ask others for help. It takes practice to get used to AutoCAD, so keep messing around with it :)

(Ignore the dimensions cuz it wacky)

PLAN D-1

Announcement

This is the first part of the workshop. Next time we'll work on 3-D modelling!

Next meeting will also be on Friday 5-6pm :)

Details will be emailed and posted on the FB group (ARCH@UCSD)
